Professional Summary

Computer Science graduate with a strong passion for technology, including building and troubleshooting computers, developing software, working with data, and solving technical problems. Experienced in IT support and hands-on troubleshooting, with a strong foundation in software development, databases, machine learning, cloud technologies, and containerized environments. Enjoys learning new technologies, diagnosing issues, and building practical solutions across both hardware and software.

Skills

Languages: Python, Java, JavaScript, CSS/HTML, C/C++, Haskell, Prolog, SQL, PHP, Assembly

Technologies & Frameworks: Web APIS, Scikit-Learn, Pandas, NumPy, Matplotlib, MySQL, Azure SQL, Firebase, Flask, Tailwind, Make, Jotform

Developer & AI Tools: Git, VS Code/Visual Studio, IntelliJ, Docker, GitHub Copilot, ChatGPT, Claude, Cursor

Education

University of Calgary

April 2026

Bachelor of Science in Computer Science - Science Internship Program

Calgary, Alberta

- **Relevant Coursework:** Network Systems Security, Computer Security, Operating Systems, Computer Networks, Design & Analysis of Algorithms, Database Systems, Web-Based Systems

Projects

Medical Clinic Scheduler | *Flask, HTML/CSS, Python, Javascript*

- Developed a functional web prototype simulating a real-world health dashboard using Flask for backend routing and HTML/CSS/JS for dynamic interface design.
- Integrated user flow research and UI principles to create wireframes and implement front-end components with accessibility and usability in mind.
- Used RESTful patterns and local server deployment to simulate interactive features such as data input, search filters, and user authentication.
- Collaborated in a cross-functional team to meet tight prototyping deadlines and communicate design decisions effectively.

Machine Learning Model for Diabetes Detection | *Python, Scikit-Learn, Pandas, NumPy, Matplotlib*

- Developed a machine learning model to detect diabetes using a dataset containing features such as BMI, blood pressure, and insulin levels.
- Conducted data pre-processing and feature engineering to optimize the image data for modelling
- Implemented the k-Nearest Neighbors (kNN) algorithm for classification with high accuracy.
- Used cross-validation techniques and confusion matrices to evaluate model performance.

Automated Checkout System | *Java, JUnit*

- Led a team of four in designing and implementing a secure payment solution for a self-checkout station, supporting tap, swipe, and insert payment methods.
- Applied Object-Oriented Programming principles to create a scalable and maintainable system architecture.
- Ensured high software reliability with 89%-96% test coverage, validating the robustness of the solution.

Experience

The Calgary Stampede

May 2024 – Jul 2024; May 2025 – Jul 2025; May 2026 – Present

IT Support Technician

Calgary, Alberta

- Configuring, deploying, managing and supporting Moneris POS and Cash systems used in venues across the Stampede Park.
- Provided real-time technical support during major concerts in 2024 and 2025, including Ne-Yo, Yung Gravy, Natasha Bedingfield, and Lil Jon.
- Provided real time technical support as the main on-site IT technician and troubleshooting for POS system issues, ensuring minimal downtime, data integrity and system security.
- Created, Maintained, and updated customer and vendor account information within the POS system ensuring accurate access levels and permissions.

Extracurricular

Calgary Esports United

October 2023 - April 2026

Club Member / Esports Event Coordinator

- Supported club operations by coordinating drop-in gaming sessions and assisting with event setup and participant management.
- Helped organize and facilitate online esports events, including scheduling, communication, and match coordination.
- Competed as a member of the University of Calgary Valorant team as In Game Leader, contributing to team strategy, communication, and structured practice sessions.
